Subject Index

Accumulators (see Thermal storage)

ACTDP cryocooler development:
  Ball Aerospace development, 1, 15
  for MIRI instrument, 15
  Lockheed Martin ATC development, 25
  NGST cooler development, 9, 15

ADR (see Magnetic refrigerators)

Adv. Mechanical Tech., Inc, 41

Aerospace Corporation, 85

AIM tactical cryocoolers, 671

Air Force Research Lab (AFRL):
  Ball real-time piston alignment tracking, 225
  Ball SB235 2-stage 35K Stirling deelv., 65
  long-life cryocooler database update, 599
  modeling cyclic flow in regenerators, 445
  modeling energy and exergy flow in PTs, 353
  multi-kilowatt Q-drive G-M compressor, 201
  NGST 150 K mini PT testing, 85
  phase shift in inerance tubes, 275

Air Liquide DTA (France):
  30K PT using 80K precooling, 149
  50-80K PT cooler for space, 93
  International Space Station freezer, 661

AIRS instrument cryocoolers:
  comparison with Japanese PT coolers, 101
  in-space performance, 609

Aisin Seiki, 80K PT for maglev vehicles, 681

American Superconductor:
  50W at 55K single-stage PT cooler, 157
  thermosiphon, 593

Ames Research Center (NASA):
  enthalpy; entropy and exergy in PTs, 333, 343
  Ames Laboratory (lowa State Univ):
    low temp. regenerator mats, 363
  Applications of cryocoolers (see Integration with cryocoolers)
  Astrium cryocoolers (formerly BAE and MMS):
    in-space performance on INTEGRAL, 619
  Atlas Scientific multi-kW Q-drive G-M comp, 201

Ball Aerospace cooler activities:
  6K ACTDP hybrid Stirling/J-T cooler, 1, 15
  optical refrigerator performance, 575
  real-time piston alignment tracking, 225
  SB235 2-stage 35K Stirling development, 65
  Brayton cycle (see Reverse-Brayton cryocoolers)

British Aerospace (BAe) cryocoolers (see Astrium)

CEA/SBT (France):
  100 mK ADR for space missions, 561
  30K PT using 80K precooling, 149
  50-80K PT cooler for space, 93
  sub-Kelvin sorption cooler, 543

Central Japan Railway Company:
  PT refrigerator for maglev vehicles, 681

Chinese Academy of Sciences, Cryogenics Lab:
  exper. study of high freq. PT regenerator, 439
  flow characteristics of cyclic regenerators, 431
  non-metallic pulse tube for SQUIDs, 411
  phase shift in inerance tubes, 267
  thermoacoustic-driven pulse tube cooler, 195
  thermoacoustic refrigerator for 250K, 189

CIMEX BioTech, 671

Claude refrigeration cycle, 711

Clearance seals (see Compressors)

Clever Fellows Innovation Consortium (CFIC):
  4 kW linear Q-drive compressor, 165
  control of piston drift with clearance seals, 215
  multi-kilowatt G-M compressor, 201

CMC Electronics 1-watt cooler perf, 77

CNES summary of INTEGRAL performance, 619

Collins-type 10K cryocooler, 41

Columbia University:
  LXe TP chamber, 689
  nonmetallic PT for SQUID operation, 411

Compressors:
  4kW CFIC pressure wave generator, 165
  compression losses in cryocoolers, 209
  control of piston drift with clearance seals, 215
  dynam. counterbalanced single piston comp, 241
  multi-kilowatt CFIC G-M compressor, 201
  real-time piston alignment tracking, 225
  sensorless balancing of linear compressors, 231

Creare NICMOS rev-Brayton flight data, 633

Cryomech 10K pulse tube cryocoolers, 133

Cryotiger cooler, 481

Cyclic flow, effect on regenerators, 431, 445

Darwin mission 4K sorption cooler, 503

Database of long-life cryocoolers, 599

Dilation refrigerator for Planck-HFI, 533

DRS tactical Stirling coolers, 671

165K-70W PT cooler for Xe liquefaction, 689

NIST:
phase shifts in inertance tubes, 267
PT analysis with tactical linear comp., 671
Northrop Grumman Space Tech. (previously TRW):
150 K mini PT testing at AFRL, 85
ACTDP 6K cooler development, 9, 15
AIRS 55K pulse tube cooler, 101, 609
HCC 35K/85K two-stage PT cooler, 109

Optical refrigerator performance, 575

Perovskites (see Refrigerants)
Phase change materials (see Thermal Storage)
Planck sorption coolers:
test facility for, 523
Praxair:
200W at 80K PT refrigerator, 165
1500W at 72.5K PT refrigerator, 173
effect of mean pressure on PT, 177
large thermoacoustic PT refrigerator, 181
Propellant liquefaction and densification, 711
Pulse tube cryocoolers:
30K CEA/SBT PT using 80K precooler, 149
50-80K Air Liquide for space, 93
5K-15W AIRS, 101, 609
75K-130K 2-stage RAMOS cooler, 115
80K-5W Giesen/Leybold/AIM, 141
80K-170W for maglev vehicles, 681
165K-70W KEK for Xe liquefaction, 689
250K-80W thermoacoustic driven, 189
Amex Supercond. 50W at 55K for HTS, 157
Chinese thermoacoustic-driven PT cooler, 195
comparison of Japanese coolers for space, 101
Cryomech PT805 & PT810 lOK coolers, 133
LM-ATC 6K 4-stage ACTDP, 25
LM-ATC 55K/140K GIFTS cooler, 121
NGST 18 K precooler for ACTDP, 9, 15

NGST 35K/85K HCC 2-stage PT, 109
NGST 150 K mini PT testing, 85
Praxair 200W at 80K, 165
Praxair 1500W at 72.5K, 173
Praxair large thermoacoustic driven, 181
Raytheon hybrid Stirling/PT for 40K, 127
Sunpower 3-stage10K status, 31

Pulse tube theory and investigations:
analysis with tactical linear compressors, 671
CFD simulation with inertance tube, 285
compression losses in cryocoolers, 209
counterflow PT refrigerator, 251
effect of mean pressure on PT perf., 177
energy and exergy flows in PTs, 333, 343, 353
meas. with Leybold and AIM linear comp., 141
model using electrical network analysis, 293
non-metallic, non-magnetic for SQUIDs, 411
numerical code for design of PT, 323
numerical sym. of flow and heat transfer, 303
orbit induced temperature oscillations, 641, 651
phase shift in inertance tubes, 267, 275
secondary flow visualization in tapered PT, 313
study of coaxial PT with inertance tube, 261
Pusan National Univ (Korea), 261

Rare earth compounds (see Regenerators)
Raytheon Space Systems (formerly Hughes Aircraft):
CFD simulation of PT with inertance tube, 285
fast regenerator numerical model, 455
hybrid Stirling/PT for 40K, 127
numerical simulation of PT flow, 303
RS1 Stirling cooler performance, 59
Redstone Engineering hybrid 10K J-T, 583
Redundancy trade-offs, 609
Refrigerants:
doped AMnOj perovskites for ADRs, 381
mixed refrigerant comparison in Cryotiger, 481

Regenerators:
ceramic material status (GAP, GOS, etc), 373
counterflow regen. for PT refrigerator, 251
cylic flow, characteristics with, 431, 439, 445
ductile intermetallic compounds for 4-16K, 363
calcium generator numerical model, 455
flow circulation in foil-type regenerators, 421
lead wire mesh for low temp., 389
LIGA-fabricated microchannel, 405
temp. and porosity matrix for high freq., 395
non-metallic, non-magnetic for SQUIDs, 411
optimization using REGEN 3.2, 463

Reliability of cryocoolers:
active versus standby redundancy, 609
STI Stirling cooler reliability data, 51
Reverse-Brayton cryocoolers:
use for propellant densification, 711
NICMOS operation on HST, 633
RHESSI in-space performance, 629
Ricor:
dyn. counterbalanced 1-piston comp., 241
sensorless balancing of 2-piston comp., 231
Sierra Lobo, Inc., 293
Sorption cryocoolers:
- CEA/SBT sub-Kelvin for Herschel, 543
- Planck cooler test facility at JPL, 523
- microcooler at Univ of Twente, 489
- single-cell sorption compressor design, 513
Space cryocoolers, AFRL database for, 599
Space instrument missions:
- AIRS, 101, 609
- Darwin, 503
- GIFTS, 121
- Herschel, 543
- INTEGRAL, 619
- International Space Station (ISS) Freezer, 661
- MIRI (JWST), 15
- NICMOS, 633
- Planck, 523, 533, 543
- RAMOS, 115
- RHESSI, 629
SQUIDs (see Integration of cryocoolers with):
- Superconductor Technologies Inc (STI):
  - 6W-77K "Sapphire" cryocooler, 51
Texas Instruments (see DRS cryocoolers)
Thales Cryogenics:
- 50-80K PT cooler for space, 93
- cryocooler in ISS freezer, 661
- LSF95xx flexure bearing coolers, 71
Thermal storage:
- helium/charcoal TSU for 15K, 583
- Thermal switch (see Heat switch)
Thermocryostats:
- Chinese thermoacoustic-driven PT cooler, 195
- large thermoacoustic-driven PT refriger., 181
- refrigerator for 80W cooling at 250K, 189
Thermosiphon, for remote cryo devices, 593
Throttle cycle (see J-T cryocoolers)
TRW (see Northrop Grumman Space Tech.)
Tsukuba Magnet Laboratory:
- regenerator mat'l status (GAP, GOS, etc), 373
Turbo Brayton coolers (see reverse Brayton coolers)
- Univ. of Giessen, 141
- Univ. of New Mexico, 275, 353
- Univ. of Oxford:
  - compression losses in cryocoolers, 209
- Univ. of Southern Calif., PT modeling, 303
- Univ. of Tokyo, 695
- Univ. of Tsukuba, 313
- Univ. of Twente:
  - Darwin 4K sorption cooler, 503
  - single-cell sorption compressor design, 513
  - sorption microcooler development, 489
- Univ. of Wisconsin:
  - heat switches and magnets for mini-ADR, 567
  - model for magnetic refrigeration system, 471
  - regenerator optimization using REGEN 3.2, 463
- Vibration:
  - dynam. counterbalanced single piston comp., 241
  - sensorless balancing of linear compressors, 231
  - suppression for gravitational wave detect., 695, 703

Sub-Kelvin coolers:
- 100 mK ADR for space missions, 561
- CEA/SBT sorption for Herschel, 543
- continuous ADR for below 100 mK, 553
- dilution refrigerator for Planck-HFI, 533
Sumitomo Heavy Industries:
- PT vibration suppres. for grav wave det., 695, 703
- regenerator mat'l status (GAR, GOS, etc), 373
Sunpower coolers:
- RHESSI on-orbit performance, 629
- status of 3-stage 10K pulse tube cooler, 31
Superconductor applications (see Integration of cryocoolers with)
