

Cryocoolers 1

TABLE OF CONTENTS

Page

Cover: Drawing of the first Stirling engine from the original 1816 patent. The process of regenerative heat exchange in this engine is a key feature of many present day cryocoolers. From the book Stirling-Cycle Machines by G. Walker (Clarendon Press, Oxford, 1973).

1.	Introductory Remarks and Summary,	1
2.	"A Preview of Unconventional Suggested Cooling Processes and Some Practical Problems Related to Small Refrigerators," by Pierre M. Roubeau	3
3.	"Refrigeration Requirements for Superconducting Computers," by R. W. Guernsey and E. B. Flint	15
4.	"Development Approaches for Long-Life Cryo-Coolers," by Ronald White and William Haskin	21
5.	"Theoretical Analysis of A 3-Stage Stirling Cycle Cryocooler," by Stuart B. Horn and Mark S. Asher	30
6.	"Some Thermodynamic Considerations of Helium Temperature Cryocoolers," by D. E. Daney...	48
7.	"Dynamic Analysis of a Small Free-Piston Resonant Cryorefrigerator," by R. A. Ackermann	57
8.	"Methods for the Measurement of Regenerator Ineffectiveness," by Ray Radebaugh, DeI Linenberger, and R. O. Voth.	70
9.	"Serviceable Refrigerator System for Small Superconducting Devices," by Ralph C. Longworth.	82
10.	"Performance of A 1 Watt 4K Cryosystem Suitable for A Superconducting Computer," by E. B. Flint, L. C. Jenkins, and R. W. Guernsey	93
11.	"Developments Toward Achievement of a 3-5 Year Lifetime Stirling Cycle Refrigerator for Space Applications," by Max G. Gasser, Allan Sherman, and William Beale.	103
12.	"Thor Cryocooler," by G. M. Benson and R. J. Vincent	116

TABLE OF CONTENTS, continued

13.	"A Cryogenic System for the Small Infrared Telescope for Spacelab 2," by E. W. Urban, L. Katz, J. B. Hendricks, and G. R. Karr.	117
14.	"Requirements for and Status of a 4.2 ⁰ K Adsorption Refrigerator Using Zeolites," by William H. Hartwig	127
15.	"Cooling of SQUID Devices by Means of Liquid Transfer Techniques for Reduced Helium Consumption and Enhanced Temperature Stability," by Eldon A. Byrd and R. G. Hansen	136
16.	"A Contamination Free Compressor for Small Scale Stirling Refrigerators," by J. G. Daunt and C. Heiden	141
17.	"A Bi-Directional Linear Motor/Generator with Integral Magnetic Bearings for Long Lifetime Stirling Cycle Refrigerators," by Philip A. Studer and Max G. Gasser	146
18.	"Design Considerations for Microminiature Refrigerators Using Laminar Flow Heat Exchangers," by W. A. Little	154
19.	"Progress in the Development of Microminiature Refrigerators Using Photolithographic Fabrication Techniques," by R. Hollman and W. A. Little.	160
20.	"Low Temperature Regenerators," by Lawrence A. Wade	164
21.	"Measurement of Thermal Properties of Cryocooler Materials," by J. E. Zimmerman, D. B. Sullivan, R. L. Kautz, and R. D. Hobbs.	173
22.	"Gas Heat Switches," by Emanuel Tward.	178
23.	"Operation of a Practical SQUID Gradiometer in a Low-Power Stirling Cryocooler," by D. B. Sullivan, J. E. Zimmerman, and J. T. Ives	186
24.	"Current Status of High Temperature Josephson Device Technology," by M. Nisenoff.	195
25.	Attendance List	210
